

# The city of Lelystad Holland

Innovators in Security

## The city of Lelystad

The municipality of Lelystad is a pioneering and expanding area. Not only is the number of residents set to rise to 80,000 in 2015, there are also serious efforts to increase employment opportunities to encompass 32,000 jobs.

Lelystad is a city with a favourable location and an urban layout. Lelystad lies in the relatively new area of Flevoland, the surrounding environment is clean and the water, air and ground are more or less untarnished. Lelystad is surrounded by forests, water and other natural areas. It is pretty much unique in its field. Lelystad's local council is housed in recently renovated premises and was seeking an innovative security management system. They held a public tendering process and ultimately chose the innovative iProtect™ Aurora Security Management System with an integral solution for online and offline access control techniques provided by Keyprocessor.

## Collaboration

The collaboration between the city of Lelystad and solution provider Keyprocessor also involved the Koldijk installation company. The collaboration between the three parties ran very efficiently and therefore the Lelystad project was completed to the satisfaction of all.

## Integrated security system

Lelystad council required a complete security system. They selected the iProtect™ Security Management System with various integrated security applications; Access control, Video management from DIVA, Burglar detection, Intercom system from Commend and the Salto offline access management application for 700 lockers.

## Integrated security system

The iProtect™ Security Management System provides a huge range of options and really came into its own in the task carried out for the council. Lelystad council has started using 'new work' techniques. This method of working means that none of the employees has their own, fixed workplace. It is, therefore, important that everyone is provided with a secure area where they can store their personal belongings.

In order to provide this, Lelystad council chose to install 700 Salto lockers which integrated into the iProtect™ Aurora.
